What's New In?

CSC is an asynchronous communication library for the Microsoft Windows operating system. Category:ActiveX server control Category:Microsoft application programming interfacesQ: how to use custom content-types in zf2 I have created a custom content-type and it is displayed properly in zf2 but I can't figure out how to actually use that content-type and its data. So basically I have a function that sends an email (logged in as the user) and has some data such as the title of the email etc. It's all working fine but I don't know how I can actually pull the data out of the content-type and use it. I have tried using a service, I have tried using a function, I have tried getting it from the request object but it just keeps spitting out the data in the content-type, not the variables in the content-type. So I'm wondering if anyone can provide an example of how I can use the content-type or a way of possibly using the data in the content-type, I'm struggling to work this one out. Below is my email service.

```
namespace Common\Mail; use Zend\Mime\Mime; use Zend\Mime\Message; use Zend\Mail\Transport\Smtp; use Zend\Mail\Message as MessageMessage; use Zend\Mime\Part\Attachment; class Email { public function send($subject, $message) { $from = 'name@company.com'; $subject = $subject; $msg = $message; $parts = [ 'From' => $from, 'Subject' => $subject, 'TextBody' => $msg, 'HtmlBody' => $msg ]; $mime = new Mime();
```

```
$mime->setType( 'text/html' ); $mime->setCharset( 'UTF-8' ); $body = $mime->createMessage() ->setParts( $parts )  
->setFrom( $from ) ->set
```

System Requirements For Client Server Communications Library For Visual Basic:

-Requires Windows 7 - Requires a compatible graphics card (Intel HD4000 or above, AMD HD4000 or above) - Recommended GPUs: Intel HD 4000, AMD HD 5000 (or higher). - Recommended GPUs: Intel HD 4000, AMD HD 5000 (or higher). CPU: 1GHz or higher - Recommended CPUs: AMD Athlon IIX, AMD Phenom II X3 (or higher) - Memory: 8 GB (or more) - Memory: 8 GB (or more) Hard Disk:
